

Protect your boat  
against lightning  
and power surges,  
actively.

EUTHALIA  
MARINE

# Lightning and power surges:

a serious hazard for your boat.

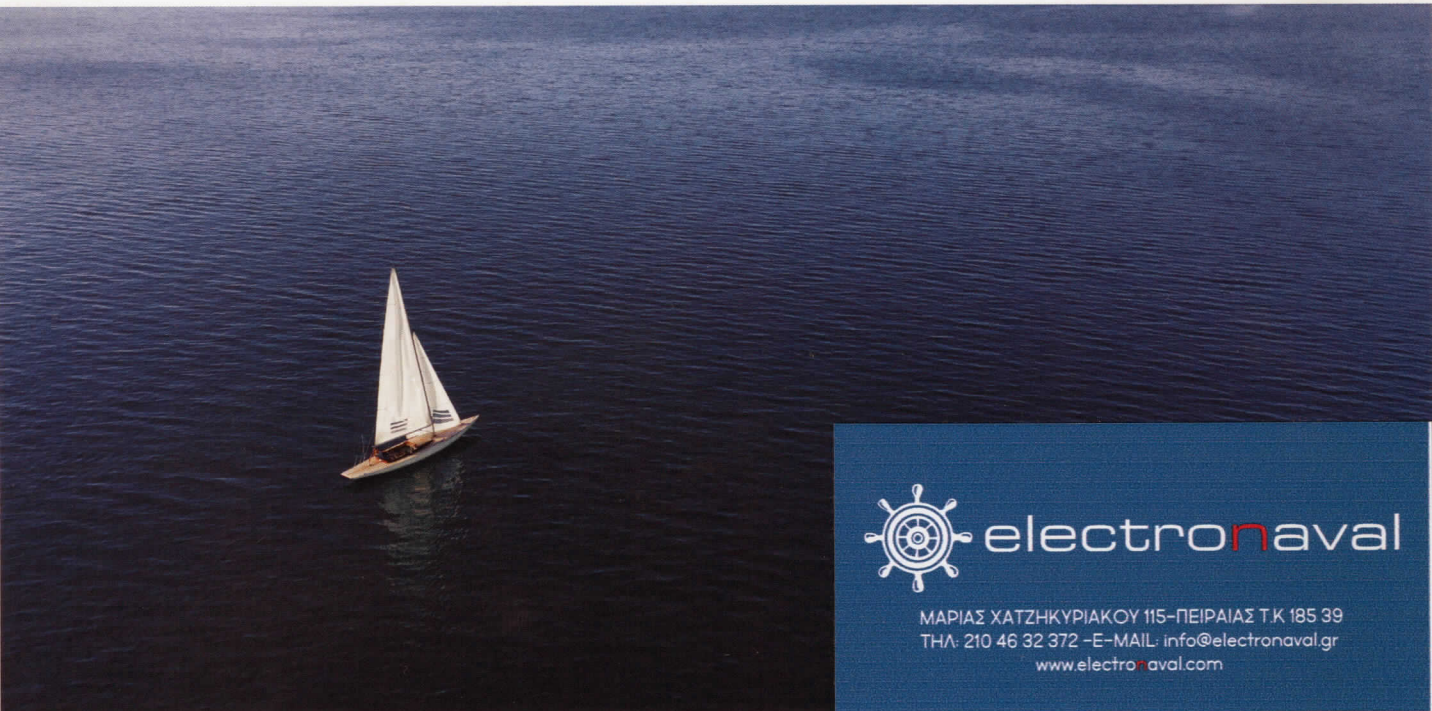

Thunderstorms at sea can be extremely severe weather events. Whenever a strong thunderstorm is encountered while navigating, there is a very real sense of imminent danger. However, **people generally tend to underestimate the damage that lightning and power surges can cause** in terms of injuries to people on board and damage to the boat and its on-board systems. Moreover, the material that the boat is made of can even affect its likelihood of being struck. Among boaters, protection against lightning strikes is currently not a widespread concern, or at most might be addressed using a passive approach. **But what if lightning protection were to be more preventive, even on boats?**

Lightning strikes are powerful natural phenomena for which a boat and its mast can serve as perfect conductors.

- **Direct lightning strikes:** result in breakdowns, or destroy parts of the boat or its on-board systems;
- **Indirect lightning strikes:** cause power surges that can affect all of the boat's electrical and electronic equipment.

**Find out how to navigate more safely, with Euthalia Marine.**

## Euthalia Marine:

Your new ally at sea.

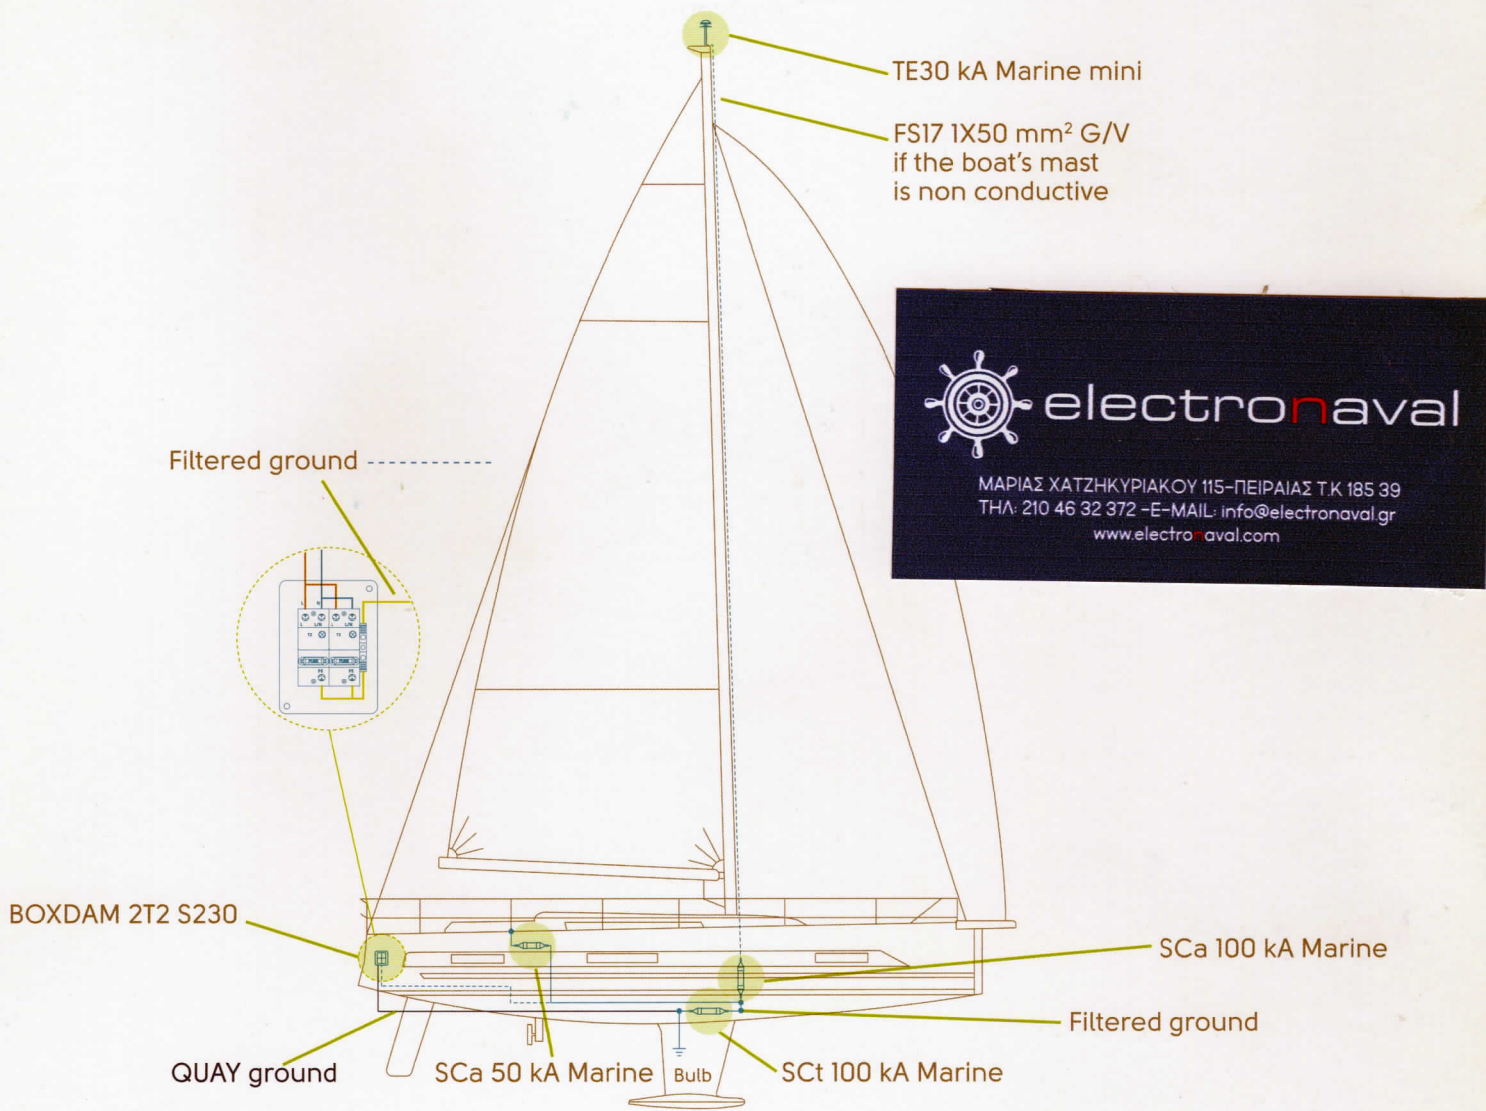

**EUTHALIA Marine** markets and sells lightning and surge protection systems designed specifically for boats. All our solutions are produced by **INGELVA**, an **international brand that's been an industry leader for over 70 years**.

Euthalia Marine is the ideal partner, as it is even committed to assisting its customers throughout the design, testing and maintenance phase.

# EUTHALIA Marine protection systems:

Comprehensive lightning and power surge protection.

## ENERGICA

The products from the energica® line are designed to protect against **direct downward lightning strikes**.

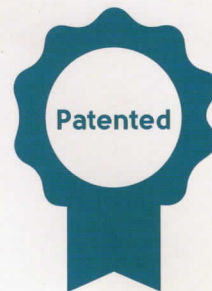

## ARMONICA

The products from the armonica® line are designed to protect against **indirect lightning strikes and power surges**.

## Patented technology:

an added guarantee of quality and reliability.

Euthalia Marine systems are made with patented technology Ingelva, for over 70 years guarantee of a completely safe and reliable product in the field of lightning protection and surges. Of course Made in Italy.

## The advantages offered by our solutions:

always active, guaranteeing complete protection.

- **Active protection 24/7** – our devices are constantly working to minimise the risk and likelihood of lightning strikes.

- They neither generate **nor require any electricity** to operate.

- **Discreet, comprehensive protection for the entire boat**, from the crew and passengers to the structure, the on-board instrumentation, and the electrical system.

**Take advantage of our special  
conditions to obtain Euthalia  
protection systems for your boat.**

**Contact your Euthalia Marine partners for  
a professional consultation, inspection and price quote.**
